CSC 317-04 Group Project 2

Team: Little Nightmares

Name - Github:

      Shem Cheng - jeshem

      Thien Pham - ThienTheCreator

Repo: https://github.com/CSC317-Spring2021/csc317-group-html-storefront-jeshem

For this assignment, we were to take our website and implement Javascript code into it. The first thing we did was look at our existing site and determine what we could easily improve with JS to help ease us into working with JS with HTML and CSS. As such, our first mini project was to implement JS into the slideshow on the front page of the website. Shem, who made the original slideshow container with HTML and CSS, was successful enhancing the slideshow to allow a dynamic amount of images to be used though he messed up the format spacing of the page in the process. Thien however was able to fix this problem and move all the elements of the page back to where they needed to be.

Next, we decided to use Javascript to allow our menu pages and our cart to interact so that customers could order food from our website. Thien took charge of creating the cart, using cookies to allow the site to store information from the menu pages to be passed to the cart page. In the meantime, Shem worked on the menu pages so that customers could interact with it to order food to be stored in the cart.

A problem we are having as a team is that a few of our teammates seem to have gone missing. We have not heard from our teammates Aung Ko Ko Oo or Million Kassa Birhanu over Discord, text, or email nor have either of them contributed to the team github for some time.
